

In the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

1. (Original) A steel for a crude oil tank characterized by containing, in mass, 0.001 to 0.2% C, 0.01 to 2.5% Si, 0.1 to 2% Mn, 0.03% or less P, 0.007% or less S, 0.01 to 1.5% Cu, 0.001 to 0.3% Al, 0.001 to 0.01% N and one or both of 0.01 to 0.2% Mo and 0.01 to 0.5% W, with the balance consisting of Fe and unavoidable impurities.

2. (Original) A steel for a crude oil tank according to claim 1, characterized by satisfying the following expression, in mass %;

$$\text{Solute MO} + \text{Solute W} \geq 0.005\%.$$

3. (Currently Amended) A steel for a crude oil tank according to claim 1 ~~or 2~~, characterized in that the carbon equivalent (Ceq.), in mass %, defined by the equation (1) is 0.4% or less;

$$\text{Ceq.} = \text{C} + \text{Mn}/6 + (\text{Cu} + \text{Ni})/15 + (\text{Cr} + \text{Mo} + \text{W} + \text{V})/5 \quad (1).$$

4. (Currently Amended) A steel for a crude oil tank according to ~~any one of claims 1 to 3~~ claim 1, characterized in that the Cr content is less than 0.1 mass %.

5. (Currently Amended) A steel for a crude oil tank according to ~~any one of claims 1 to 4~~ claim 1, characterized by further containing, in mass, 0.1 to 3% Ni and/or 0.1 to 3% Co.

6. (Currently Amended) A steel for a crude oil tank according to ~~any one of claims 1 to 5~~ claim 1, characterized by further containing, in mass, one or more of 0.01 to 0.3% Sb, 0.01 to 0.3% Sn, 0.01 to 0.3% Pb, 0.01 to 0.3% As and 0.01 to 0.3% Bi.

7. (Currently Amended) A steel for a crude oil tank according to ~~any one of claims 1 to 6~~ claim 1, characterized by further containing, in mass, one or more of 0.002 to 0.2%

Nb, 0.005 to 0.5% V, 0.002 to 0.2% Ti, 0.005 to 0.5% Ta, 0.005 to 0.5% Zr and 0.0002 to 0.005% B.

8. (Currently Amended) A steel for a crude oil tank according to ~~any one of claims 1 to 7~~ claim 1, characterized by further containing, in mass, one or more of 0.0001 to 0.01% Mg, 0.0005 to 0.01% Ca, 0.0001 to 0.1% Y, 0.005 to 0.1% La and 0.005 to 0.1% Ce.

9. (Currently Amended) A steel for a crude oil tank according to ~~any one of claims 1 to 8~~ claim 1, characterized in that the area percentage of microscopic segregation portions where the Mn concentration is 1.2 times or more the average Mn concentration in the steel is 10% or less.

10. (Currently Amended) A method for producing a steel for a crude oil tank ~~according to any one of claims 1 to 9~~, characterized in that, in the event of applying accelerated cooling after hot rolling a slab containing components according to ~~any one of claims 1 to 8~~ claim 1, the average cooling rate of said accelerated cooling is in the range from 5 to 100°C/sec., the accelerated cooling end temperature is in the range from 600°C to 300°C, and the cooling rate in the temperature range from said accelerated cooling end temperature to 100°C is in the range from 0.1 to 4°C/sec.

11. (Original) A method for producing a steel for a crude oil tank characterized by applying tempering or annealing at 500°C or lower to a steel produced by the method according to claim 10.

12. (Currently Amended) A method for producing a steel for a crude oil tank ~~according to any one of claims 1 to 9~~, characterized in that, in the event of applying normalizing after hot rolling a slab containing components according to ~~any one of claims 1 to 8~~ claim 1, the heating temperature of said normalizing is in the range from the  $A_{c3}$  transformation temperature to 1,000°C and the average cooling rate in the temperature range from 700°C to 300°C is in the range from 0.5 to 4°C/sec.

13. (Original) A method for producing a steel for a crude oil tank characterized by applying tempering or annealing at 500°C or lower to a steel normalized according to claim 12.

14. (Currently Amended) A method for producing a steel for a crude oil tank according to ~~any one of claims 10 to 13~~ claim 10, characterized by, before hot rolling a slab ~~containing components according to any one of claims 1 to 8~~, applying diffusion heat treatment to said slab at a heating temperature of 1,200 to 1,350°C and for a retention time of 2 to 100 hr.

15. (Currently Amended) A crude oil tank characterized in that the floor plate, deck plate, side walls and structural members thereof are made wholly or partially of a steel for a crude oil tank according to ~~any one of claims 1 to 9~~ claim 1.

16. (Original) A method for protecting a crude oil tank to against corrosion characterized by removing, either mechanically or chemically, hot-rolling scale on the surface of a crude oil tank according to claim 15 and exposing the base steel substrate.

17. (Original) A method for protecting a crude oil tank against corrosion according to claim 16, characterized by forming one or more layers of a coating film 10  $\mu\text{m}$  or more in thickness on the surface after hot-rolling scale is removed mechanically or chemically.
